AERATOR / FLOPULSE

Flopulse 11kW in a leachate lagoon

OPERATIONS:

The specially designed propeller projects the wastewateron a cone for dispersing it into the atmosphere in a regular corolla. The wastewater then enjoys optimum contact with the atmosphere which leads to a significant transfer of Gas-Co₂/Oxygen. When the oxygenated liquid falls into the basin, it creates a circular current with a wide radius.

Result: the liquid mass benefits from a continuous supply of oxygen.

FLOPULSE est utilisé dans de nombreux cas :

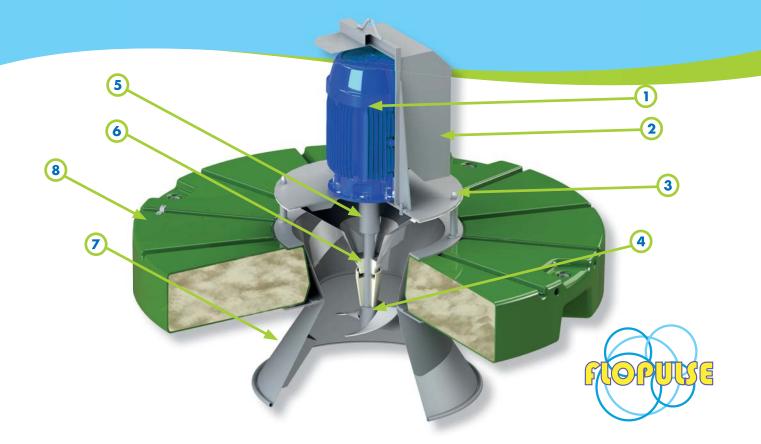

- All loaded liquid wastewater,
- Cooling of waste water in the food industry,
- Lagooning of cheese industries, wineries, paper mills ...
- Municipal aerated lagoons,
- Leachate aeration,
- Aeration of pig and sheep slurry,
- Aeration of water reserves ...

Technical and economic advantages:

- Compact, transportable unit,
- very simple and inexpensive installation,
- no level adjustment (unit),
- no maintenance (no greasing).
- Quality materials and components.

AERATOR / FLOPULSE

DESCRIPTION:

EnginelP 55 1500 t/mn.
Engine cover in stainless steel AISI 316L.
Transmission shaft in stainless steel AISI 316L.
Air mixer diffuser cone in stainless steel AISI 316L.
Suction cone in stainless steel AISI 316L.
J blade propeller in stainless steel AISI 316L.
PU foamed polyester float or rotation-moulded PE

Each unit comes with 30 meters of submersible cable, extra length on request.

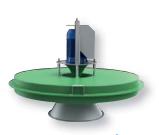

FLOPULSE >		2cv	3cv	4cv	5,5cv	7cv	10cv	15cv	20cv	30cv
Power output	kW	1,5	2,2	3	4	5,5	7,5	11	15	22
